Keysight Technologies Infiniium Z-Series Oscilloscopes

Data Sheet

Achieve new extremes

- 63 GHz of real-time bandwidth on 1 or 2 channels
- 33 GHz of real-time bandwidth on 2 or 4 channels

Introduction

Achieve new extremes

With the emergence of technologies pushing hundreds of Gb/s, an oscilloscope must now have high bandwidth, low noise and fast processing. That is the idea behind the Keysight Technologies, Inc. Infiniium Z-Series oscilloscopes. They feature up to 63 GHz of real-time oscilloscope bandwidth and the industry's lowest noise and jitter measurement floors.

Featuring

- 63 GHz of real-time oscilloscope bandwidth
- The industry's only upgradable channel oscilloscope in a single frame (from 2 to 4 channels)
- The industry's lowest noise and jitter measurement floor
- The industry's highest ENOB at bandwidths up to 63 GHz
- The industry's deepest memory (up to 2 Gpts)

The Infiniium Z-Series captures rise times as fast as 5 ps (20/80).

| | Bandwidth | | | Sample rate | : | | Memory de | pth |
|----------|-----------|-----------|-----------|-------------|-----------|-----------|-----------|---------|
| | 1 channel | 2 channel | 4 channel | 1 channel | 2 channel | 4 channel | Standard | Maximum |

Advanced IC Design and Technology Help You Solve Your Biggest Problems

At the extremes of electrical and optical measurements ...

You need to make rise time measurements without being limited by scope bandwidth

The Z-Series is Keysight Technologies' second generation of enabling 63 GHz of oscilloscope bandwidth. RealEdge technology is implemented using a unique combination of time interleaving, frequency interleaving and proprietary signal processing.

You need to see your signal and not oscilloscope noise

The Z-Series leverages technology from the award-winning Infiniium 90000X and 90000Q Series oscilloscopes, which provide leading signal integrity specifications. The Z-Series takes advantage of leading-edge indium phosphide chip technology and custom thin film packaging technology, which ultimately leads to the lowest-noise-, real-time oscilloscope in the world. With industry-leading bandwidths, Z-Series scopes let you see your fastest signals as they really are.

You need fast analysis and hardware acceleration

The Z-Series has a capacitive touch screen, new processor and 16 GB of RAM to ensure faster processing than previousgeneration Infiniium oscilloscopes.

RealEdge technology blocks enable 63-GHz real-time bandwidth.

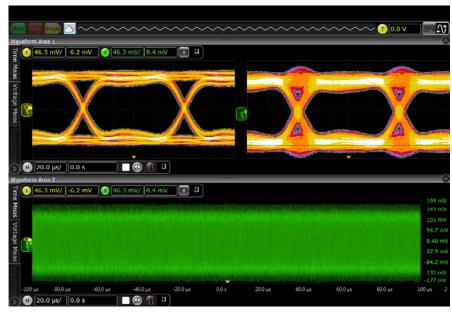

Infiniium's custom multi-chip modules feature indium phosphide chips and Keysight proprietary packaging technology, enabling high bandwidth and low noise.

The Oscilloscope — Digital Measurement and Analysis

With 63 GHz of bandwidth to capture rise times as fast as 5 ps and recover clocks on NRZ data rates as fast as 120 Gbit/s, the Z-Series is the world's fastest real-time oscilloscope. Its four channels at 33 GHz make it ideal for 32 Gb/s and greater SERDES designs. In addition to providing leading-edge bandwidth, the Z-Series helps you to find your real edge, by featuring the industry's lowest noise and jitter measurement floor, which means less scope noise in your measurements and a truer depiction of your signal.

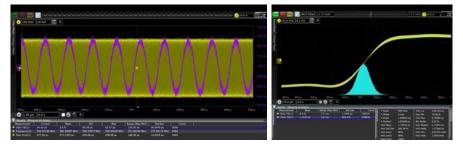

Capture, display and measure multiple real-time eyes simultaneously with the Z-Series.

Z-Series features the following to enable extreme digital analysis

- 1. Full offline analysis
- 2. Flexible user interface that supports multiple displays and multi-touch
- 3. Two unique jitter separation algorithms, including bounded uncorrelated jitter (BUJ) breakdown
- 4. Clock recovery on NRZ data rates as fast as 120 Gb/s
- 5. Memory depth that captures milliseconds of data at 160 GSa/s

With its flat frequency response and low noise, the Z-Series is able to accurately measure jitter components such as ISI.

With the 63 GHz bandwidth, the Z-Series is able to effectively characterize the time interval error trend of high speed signals as well as fast rising edges, down to 5 ps.

The Spectrum Analyzer — Radar and Satellite Communications Analysis

You need to easily compute both magnitude and phase

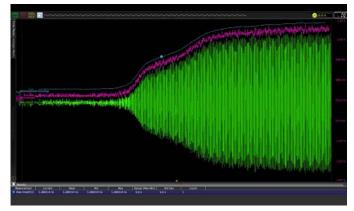

Infiniium Z-Series oscilloscopes include a Fast Fourier Transform (FFT) for frequency domain (spectrum) analysis. The integrated FFT offers an alternative to a dedicated spectrum analyzer. Use the FFT to compute both magnitude and phase and take advantage of several useful features to assist in spectral analysis. The FFT can control span and resolution bandwidth. Automatic measurements and markers measure spectral peak frequencies and magnitudes as well as deltas between peaks. Use the amplitude demodulation (envelope mode) to measure rise and fall times on the entire envelope.

Z-Series features the following to enable extreme RealEdge analysis

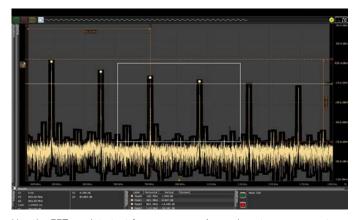

- Multiple FFT windows including Hanning, rectangular, Blackman-Harris, flattop, and Hamming
- Peak search and navigation for fast analysis
- Amplitude modulation (envelope mode) – create radar envelopes
- FFT mask trigger
- Gated FFT measurements

The Z-Series FFT quickly identifies peaks and has key controls such as span, start and stop, which make the oscilloscope behave more like a spectrum analyzer.

Amplitude demodulation makes it possible to analyze difficult waveforms such as envelopes.

Use the FFT mask to test frequency margins and capture rare events.

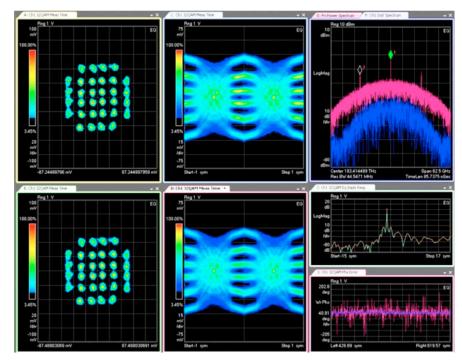

The Optical Modulation Analyzer

Z-Series oscilloscopes are also available in combination with the N4391A optical modulation analyzer as a fully specified turn-key instrument. This compact solution offers the highest bandwidth available on the market and is the most advanced test solution for advanced research on 400G and terabit transmission. Even for the lower 20 GHz bandwidth range, this compact and easy-to-use solution is a reference system for 100G transmission required by R&D labs working at 100G and beyond. By providing four channels of up to 63 GHz bandwidth, the Z-Series saves you the expense of a second instrument to analyze dual polarization.

If you prefer to operate with your own optical receivers but want to benefit from the enormous analysis capability, you can get the N4391A's analysis software as a standalone package.

Features and benefits

- Up to 63 GHz true analog bandwidth on four channels by time synchronizing two 2-channel, 63 GHz scopes
- Up to 33 GHz true analog bandwidth on four channels in one scope
- Up to 120 Gbaud symbol rate analysis
- Four times better EVM noise floor than typical QPSK transmitter
- Compact four channels in turn-key solution
- Up to four 160 GSa/s real-time sampling for optimal phase tracking
- Well-defined interface to include your own MATLAB algorithms
- Customer-configurable APSK and OFDM decoders

The N4391A offers a powerful toolset to debug the most challenging errors, with tools proven by thousands of RF engineers

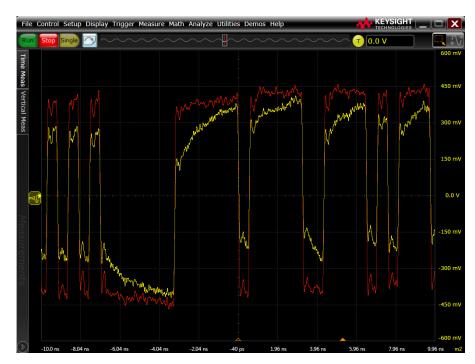

The Network Analyzer - Time-Domain Transmission (TDT)

You need to be able to maximize your margins by removing the effects of cables and fixtures

As bandwidths continue to increase and cable loss becomes more and more of a problem, the Z-Series has the technology to solve this issue. The Z-Series oscilloscopes offer award-winning PrecisionProbe Advanced technology. You no longer need to ignore cable loss because you are short on time or budget. Using PrecisionProbe Advanced technology, you can characterize cables as fast as 63 GHz and remove the loss they create. PrecisionProbe Advanced technology gives you one of the world's fastest edges at less than 5 ps and uses this edge to perform a TDT on your cable. Based on the loss of your cable, PrecisionProbe Advanced then compensates your measurement system. gaining back valuable margin typically lost in cables.

You need to test multiple lanes automatically and still maximize margins

The Z-Series features many compliance applications, which provide full automation of any switch connected to your system. The software is fully compatible with PrecisionProbe Advanced compensation, which allows you to characterize every input using only your Z-Series oscilloscope and then seamlessly automate every measurement in your compliance application. Save valuable time and resources in such technologies as DisplayPort and PCI Express® Gen3.

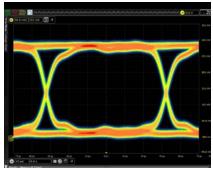

By analyzing cables you can increase your margins by removing insertion loss caused by cables.

The World's Fastest Probing System For Your Highest Performance Needs

The InfiniiMax III and III+ probing system provides the highest bandwidth and incredibly low loading to allow for a completely new level of signal fidelity and accuracy. Eight different InfiniiMax probe amplifiers ranging from 8 to 30 GHz are available for matching your probing solution to your performance and budget requirements. The InfiniiMax III and III+ probe system is unmatched by any product in the market. It uses a proprietary 200 GHz transistor switching speed indium phosphide IC process with backside ground vias and novel thick-film technology to accommodate your highest-performance needs.

| Description | Probe or accessory | Bandwidth |
|--|--------------------|-----------|
| 30-GHz InfiniiMax III probe amplifier | N2803A | 30 GHz |
| 25-GHz InfiniiMax III probe amplifier | N2802A | 25 GHz |
| 20-GHz InfiniiMax III probe amplifier | N2801A | 20 GHz |
| 16-GHz InfiniiMax III probe amplifier | N2800A | 16 GHz |
| 20-GHz InfiniiMax III+ probe amplifier | N7003A | 20 GHz |
| 16-GHz InfiniiMax III+ probe amplifier | N7002A | 16 GHz |
| 13-GHz InfiniiMax III+ probe amplifier | N7001A | 13 GHz |
| 8-GHz InfiniiMax III+ probe amplifier | N7001A | 8 GHz |
| ZIF probe head | N5439A | 28 GHz |
| Browser (handheld) probe head | N5445A | 30 GHz |
| Solder-in probe head | N5441A | 16 GHz |
| PC board ZIF tip | N2838A | 25 GHz |
| 3.5/2.92/SMA probe head | N5444A | 28 GHz |
| Performance verification fixture | N5443A | 30 GHz |
| Solder-in probe head | N2836A | 26 GHz |
| 450-ohm ZIF tip kit (set of five) | N5440A | 28 GHz |
| 200-ohm ZIF tip kit (set of five) | N5447A | 28 GHz |
| Browser tip replacement | N5476A | 30 GHz |
| Precision BNC adaptor | N5442A | 13 GHz |
| Sampling scope adaptor | N5477A | 30 GHz |
| 2.92-mm flexible cable | N5448B | 30 GHz |
| High-impedance probe adaptor | N5449A | 500 MHz |
| 35-GHz flexible cable | N2812B | 35 GHz |

Industry's only upgradable probing system.

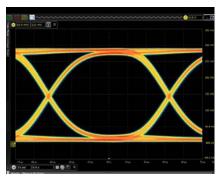

Achieve Your Real Edge

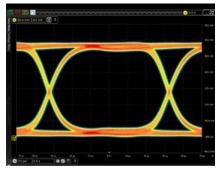

Having the right amount of oscilloscope bandwidth ensures accurate measurements. If you have too much bandwidth, oscilloscope noise becomes a contributor in your measurement. With too little bandwidth, rise times are improperly depicted. Use the chart below to find the correct oscilloscope bandwidth for the devices you are measuring.

Recommended scope bandwidth

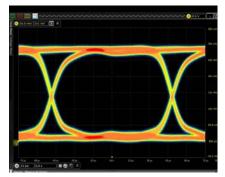

| Technology | Data rate | Fastest rise time | Scope BW |
|--------------------------|------------------|-------------------|----------|
| Ethernet 10BASE-T | 10 Mbps | 30 ns | 600 MHz |
| Ethernet 100BASE-T | 100 Mbps | 3 ns | 600 MHz |
| Ethernet 1000BASE-T | 250 Mbps x 4 | 1.2 ns | 1 GHz |
| USB 2.0 | 480 Mbps | 300 ps | 2.5 GHz |
| USB 3.0 | 5 Gbps | 50 ps | 12 GHz |
| USB 3.1 | 10.3125 Gbps | 25 ps | 25 GHz |
| DDR1 | 400 MT/s | 500 ps | 2 GHz |
| DDR2 | 1066 MT/s | 250 ps | 4 GHz |
| DDR3 | 2133 MT/s | 100 ps | 8 GHz |
| DDD4 | 3200 MT/s | 75 ps | 12 GHz |
| GDDR5 | 8 Gbps | 30 ps | 16 GHz |
| SATA 3G | 3 Gbps | 67 ps | 12 GHz |
| SATA 6G | 6 Gbps | 33 ps | 16 GHz |
| SAS-2 | 6 Gbps | 42 ps | 16 GHz |
| SAS-3 | 12 Gbps | 21 ps | 30 GHz |
| 16G FibreChannel | 14.025 Gbps | 24 ps | 30 GHz |
| HDMI 1.4 | 3.4 Gbps | 50 ps | 8 GHz |
| DisplayPort 1.2 | 17.28 Gbps | 50 ps | 13 GHz |
| 10G Ethernet | 10 Gbps | 60 ps | 12 GHz |
| 10Gbase-KR | 10.3125 Gbps | 24 ps | 25 GHz |
| XAUI | 3.75 Gbps | 60 ps | 12 GHz |
| MIPI® M-PHY® | 5.83 Gbps | 17.2 ps | 24 GHz |
| MIPI D-PHY SM | 2.5 Gbps | 100 ps | 6 GHz |
| PCI Express 2 | 5 Gbps | 30 ps | 12.5 GHz |
| PCI Express 3 | 8 Gbps | 25 ps | 20 GHz |
| 28/32G FibreChannel | 28 Gbps | 18 ps | 45 GHz |
| Thunderbolt 10G | 10.3125 Gbps | 22 ps | 25 GHz |
| SFP + | 10 Gbps | 34 ps | 16 GHz |
| MHL | 2.25 Gbps | 75 ps | 8 GHz |
| InfiniBand II | 2.5 Gbps, 5 Gbps | 75 ps | 8 GHz |

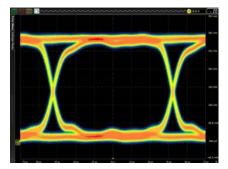

10 Gbps eye captured with 10 GHz of bandwidth.

10 Gbps eye captured with 20 GHz of bandwidth.

10 Gbps eye captured with 30 GHz of bandwidth.

10 Gbps signal captured with 63 GHz of bandwidth. Notice the faster rise time and wider eye measurements.

Achieve New Extremes

Introducing Infiniium Z-Series oscilloscopes

63 GHz of true analog bandwidth and 160 GSa/s on two channels.

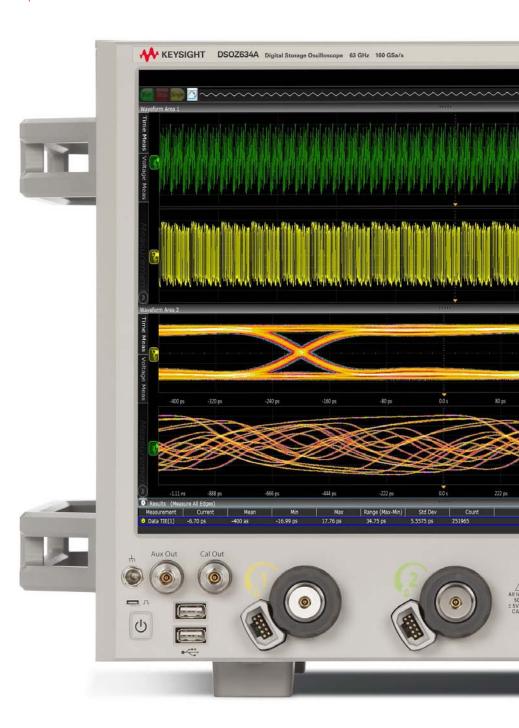

See your signal more clearly with a large 15.4-inch capacitive touch-screen display.

16 GB RAM standard, quad core I5 processor and hardware acceleration enable fast processing.

Remote access through Ethernet 10/100/1000BASE-T LAN interface with Web-enabled connectivity uses ultraresponsive UltraVNC.

USB and LAN provide remote measurements. Infiniium application remote program interface (now a standard feature) allows application/compliance software automation.

Calibration edge with a rise time of less than 15 ps enables TDT calibration with PrecisionProbe. Use the Infiniium calibration source as part of PrecisionProbe Advanced to extend calibration to an unmatched 63 GHz.

Threaded RF connectors ensure the most reliable signal integrity for high-performance instruments. The AutoProbe II interface combines the tried-and-true 3.5-mm threaded RF connector of Keysight sampling oscilloscopes with a convenient automatic torque mechanism that ensures a consistent 8 in. lbs. connection without the hassles of a torque wrench.

100-MHz reference clock ties up to 10 Z-Series together with 150 fs precision. A 10-MHz clock allows tying multiple instruments together with the Z-Series.

Live indicator shows when the scope is running a long operation.

Measure section, including a toggling marker button and a dedicated marker knob, provides quick access to your marker control.

Individual vertical knobs per channel.

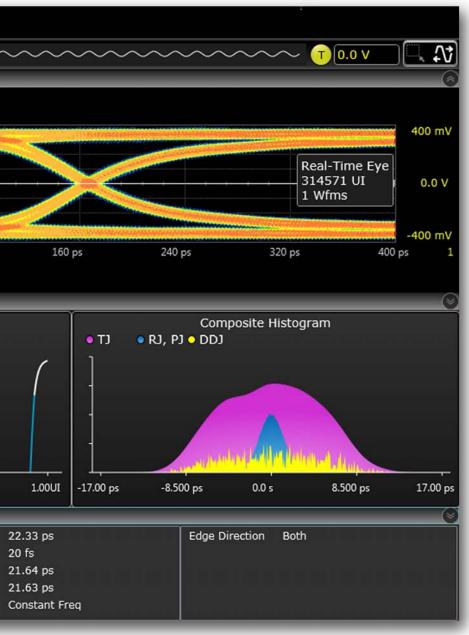

The horizontal and vertical knobs can be changed to control functions and waveform memories. Simply right click the channel control in the GUI to change these controls.

The Z-Series improves upon Keysight's use of custom integrated circuits and multichip module packaging with an exclusive technology called RealEdge. RealEdge comprises a combination of new architectures, next-generation microcircuits and thin-film components, and advanced application of Keysight's indium phosphide semiconductor process. This technology enables high-frequency capability while maintaining the industry's lowest noise and jitter measurement floor (75 fs).

Achieve New Extremes (Continued)

Infiniium User Interface

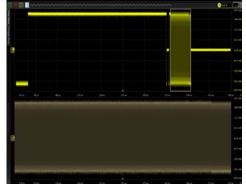

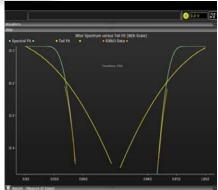

The Infiniium user interface features:

- Full offline viewer
- Up to 4 grids
- Up to 16 functions
- Up to 16 horizontal gates
- Up to 9 jitter analysis charts
- Up to 9 noise analysis charts
- Up to 4 InfiniiSim charts
- Up to 16 FFTs at once
- Up to 16 grids in each window
- Peak annotation
- Composite files for easy file sharing
- On-screen marker measurements
- Up to 20 measurements displayed at once
- Multiple display support
- Drag and drop measurements
- My Infiniium menu customization
- Up to 16 user-defined functions
- Full spectral window
- Spectral analysis controls
- Quick save
- Multi-touch for touch capacitive screen
- Function overviews/window
- Up to 16 measurement trends
- Up to 16 histograms
- Nearly unlimited real-time eyes
- Tail fit versus spectral analysis chart
- Hardware acceleration
- Plus much more

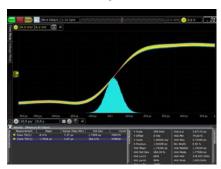

Up to 16 horizontal gates.

Jitter algorithm verifying window.

Achieve New Extremes (Continued)

Low noise and jitter

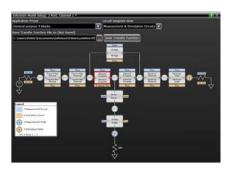

The Z-Series features the industry's lowest noise and jitter measurement floors, allowing you to truly see your signal and get your device to market faster.

PrecisionProbe

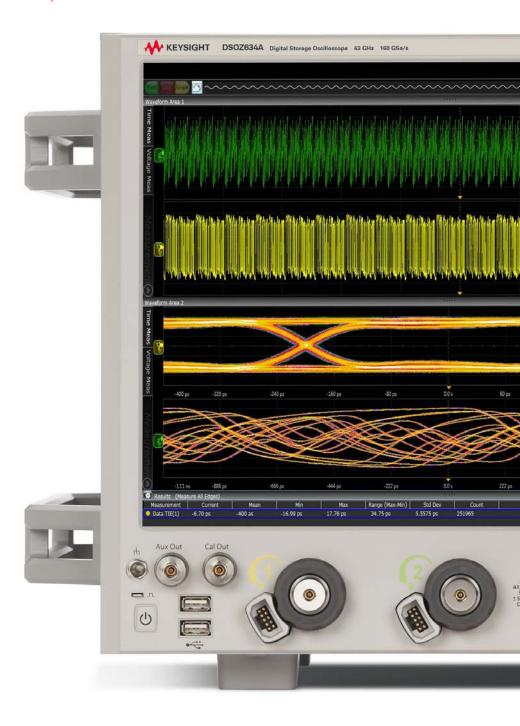

By characterizing and compensating for loss in cables, you can gain significant margin. PrecisionProbe makes using switches easy in your test setup.

Waveform transformation

Debugging next-generation buses such as PCI Express and Thunderbolt require advanced analysis tools. Keysight's InfiniiSim software helps you model the most difficult situations.

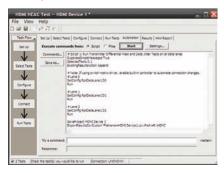

Infiniium Z-Series oscilloscopes are the world's only 4-channel, 33-GHz real-time oscilloscopes. Z-Series scopes are the only oscilloscopes that feature 30-GHz probes, making debugging your system easier and ensuring you aren't missing valuable harmonic content.

Z-Series oscilloscopes features application-specific software that allows you to gain the insight into your design that you need. Whether you are solving tough jitter or noise problems, removing loss due to cables or probes, or simply looking at protocol, the Z-Series has the tools to help you ensure you realize your best design.

Compliance software

Keysight's compliance software packages are certified by experts and provide assurance that when you pass in-house, you will pass at your customer site as well.

Protocol analysis

Infiniium protocol tools simplify debugging your design. Infiniium scopes offer full protocol analysis for PCI Express Gen 1, 2, and 3. The 128b/130b decoding features a lister that makes alignment between the lister and analog channels simple.

Advanced jitter and noise separation

Infiniium's new noise analysis tools allow you to analyze your data bus completely.

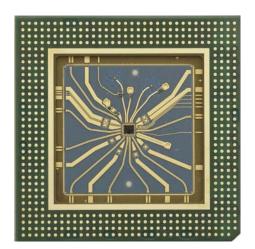

Analysis Tools: PrecisionProbe Basic and Advanced (N2809A and N2807B)

Turn your Z-Series oscilloscope into a time-domain transmissometry (TDT). Quickly characterize and compensate any input into your scope.

PrecisionProbe technology turns your oscilloscope into the ultimate characterization tool. Not only can you do the normal waveform transformations such as de-embedding through InfiniiSim, PrecisionProbe allows quick characterization of your entire probe system (including cables and switches) without the need for extra equipment. PrecisionProbe takes advantage of the fast "cal output" signal built into the Z-Series to characterize and compensate insertion loss on the measurement system.

PrecisionProbe technology:

- Properly creates custom probe transfer function = VOut/VIn
- Properly characterizes probed system transfer function such that VOut/VIn = VOut/VSrc
- Removes unwanted S21 cable loss

Every Z-Series oscilloscope has Keysight's custom indium phosphide (InP) fast edge.

Now every probe and cable in the system can have the exact same response — probe to probe or cable to cable — without the inaccuracies that using one model can produce. You can properly characterize custom probes and remove unwanted responses. In addition to characterizing the cables, PrecisionProbe allows for immediate use on the same instrument. PrecisionProbe saves you time and money while increasing your measurement accuracy.

When you combine InfiniiMax probes with switches between the amplifier and the probe head, PrecisionProbe allows for full correction and automation of each probe's path. Full automation is then available to allow for quick swapping of the inputs via Infiniium's compliance framework. For increased accuracy, purchase PrecisionProbe Advanced for faster edge speeds and true differential measurements.

| PCI Express measurement comparisons | | | | | |
|-------------------------------------|-----------------|---------------------------|----------|--|--|
| Root complex device | Eye height (mV) | Eye height PrecisionProbe | Gain (%) | | |
| 2.5 GT/s 12 GHz | 517.19 | 553.94 | 7.1 | | |
| 5 GT/s_12 GHz_3.5 dB | 312.22 | 348.19 | 11.5 | | |
| 5 GT/s_12 GHz_6 dB | 341.1 | 376 | 10.2 | | |
| 5 GT/s_16 GHz_3.5 dB | 306.6 | 348.33 | 13.6 | | |
| 5 GT/s_16 GHz_6 dB | 344.4 | 374.41 | 8.7 | | |
| 8 GT/s_12 GHz_P7 | 96.83 | 103.09 | 6.5 | | |
| 8 GT/s_12 GHz_P8 | 100.16 | 108.33 | 8.2 | | |
| 8 GT/s_16 GHz_P7 | 96.92 | 106.01 | 9.4 | | |
| 8 GT/s_16 GHz_P8 | 100.24 | 108.24 | 8.0 | | |

By characterizing and compensating for cable loss on the cable connected to the PCI Express test fixture, the designer was able to gain between 6.5 and 13.6% margin that would have been lost otherwise.

Analysis Tools: EZJIT, EZJIT Plus and SDA (Standard on DSA Models)

Gain insight into the causes of signal jitter to ensure high reliability of your design

With faster edge speeds and shrinking margins in today's high-speed digital designs, insight into the causes of jitter has become critical for success. Using EZJIT and EZJIT Plus jitter analysis software the Z-Series oscilloscopes help you identify and quantify jitter margins that affect the reliability of your design. Time correlation of jitter to the real-time signal makes it easy to trace jitter components to their sources. Additional compliance views and a measurement setup wizard simplify and automate RJ/DJ separation for testing against industry standards.

EZJIT Plus automatically detects embedded clock frequencies and repetitive data patterns on the oscilloscope inputs and calculates the level of data-dependent jitter (DDJ) that is contributed to the total jitter (TJ) PDF by each transition in the pattern, a feature not available on any other real-time oscilloscope today.

Measurement trends and jitter spectrum

EZJIT's simple tools help you quickly analyze the causes of jitter. Measurement trends allow you to see deeper views of factors affecting measurements. Jitter spectrum is a fast method to find the causes of jitter.

Two ways to separate jitter

EZJIT Plus comes with two ways to separate jitter: the spectral method and the emerging tail fit method. Both methods allow for simple separation of RJ and DJ, but the tail fit method provides proper jitter separation in the unique case of bounded uncorrelated jitter.

Unique RJ/DJ threshold view

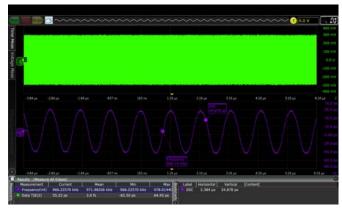

EZJIT Plus also provides a unique threshold view of the jitter spectrum with the threshold drawn on the chart. The spectral view provides insight into the decision point of the separation and works with both narrow and wide spectral separation.

Real-time eye and clock recovery

Serial data analysis (SDA) software provides flexible clock recovery including 1st and 2nd-order PLL and constant algorithms. With a stable clock, you can look at real-time eyes of transition and non-transition bits. Z-Series scopes with SDA software also provide a new unique view of bits preceding an eye.

Flexible charts

EZJIT Plus displays up to 10 graphs with unique information. Use them all to maximize your jitter analysis.

Use EZJIT software to extract spread spectrum clocks.

Determine which algorithm fits your data best.

Jitter separation makes debugging your device easy.

Analysis Tools: EZJIT Complete (Standard on DSA Models)

Discover signal anomalies to the noise of the waveform

Noise analysis with EZJIT Complete software for insight into the sources of noise in the signal.

More than your standard jitter package

To efficiently determine root cause for any type of signal degradation in the amplitude domain, you must first determine whether the problem is caused by random or deterministic sources. To help you accomplish this task, EZJIT Complete takes analysis techniques used in the time domain (jitter analysis) and extends them into the amplitude domain.

More than just an eye contour

EZJIT Complete is an in-depth view into impairments related to signal levels – either logic ones or logic zeroes – deviating from their ideal positions. Some tools simply provide a view of an eye contour, but provide no real measurement data other than nice graphics.

EZJIT Complete uses separation techniques to allow each bit to be examined to determine correlated effects and to make multiple measurements on individual bits to determine uncorrelated effects. Use FFTs to analyze the frequency domain and extract random components. Dual-Dirac modeling techniques are also carried from the jitter domain and used in the interference domain.

Key measurements

With EZJIT Complete, Z-Series scopes offer the following unique measurements:

- Total interference (TI)
- Deterministic interference (DI)
- Random noise (RN)
- Periodic interference (PI)
- Inter-symbol interference (ISI)
- RIN (dBm or dB/Hz)
- Q-factor

Analysis Tools: InfiniiSim (N5465A)

The most advanced waveform transformation software helps you render waveforms anywhere in a digital serial data link

InfiniiSim waveform transformation toolset provides the most flexible and accurate means to render waveforms anywhere in a digital serial data link. The highly configurable system modeling enables you to remove the deleterious effects of unwanted channel elements, simulate waveforms with channel models inserted, view waveforms in physically improbable locations, compensate for loading of probes and other circuit elements, and do so simply and quickly on your tool of choice, the Z-Series at up to 63 GHz of bandwidth.

Circuit models to define your setup

The InfiniiSim waveform transformation toolset provides a graphical user interface for you to define your system as you understand it and even make it arbitrarily complex. You do this by selecting topologies and defining circuit blocks.

Model reflections

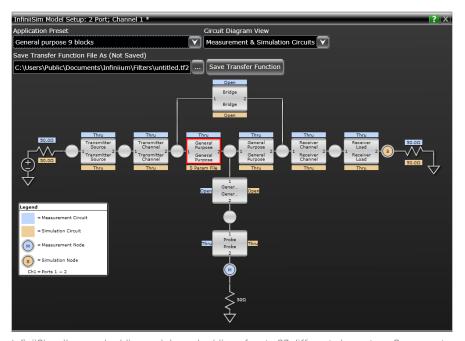

With the InfiniiSim waveform transformation toolset, you can transform signals with confidence, whether you are inserting or removing channel elements or relocating the measurement plane. InfiniiSim's advanced toolset lets you model up to 27 different elements at once and model the interaction between elements. Only toolsets with the ability to model more than one element will properly reflect a model including the oscilloscope's input. The Z-Series scopes provide their own S11 parameter to allow modeling of their own input.

Model your system with as much detail as you need

InfiniiSim features the model setup that best matches your design. Whether it is a simple single-element model or an advanced general-purpose model with up to 27 elements in the link, you can perfectly model your design and simulate the exact probing point you want.

InfiniiSim renders the waveform through hardware acceleration.

InfiniiSim allows embedding and de-embedding of up to 27 different elements or S-parameter models at once to meet your most demanding requirements.

Analysis Tools: Serial Data Equalization (N5461A)

Significantly reduce receiver errors by opening even tightly shut eyes through equalization emulation

Serial data equalization for the Z-Series provides fast and accurate equalization using decision feedback equalization (DFE), feed-forward equalization (FFE), and continuous-time linear equalization (CTLE) modeling in real-time. Serial data equalization software allows you to input your own self-designated tap values to verify your design. If you prefer, the software will find the optimal tap values for you. CTLE allows DC gain and two-pole modeling.

Analysis Tools: InfiniiScan (N5414B)

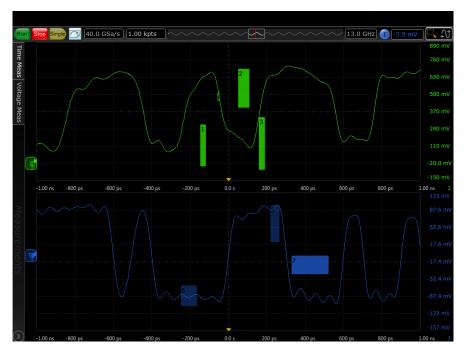

Trigger on events that hardware triggers can't handle

InfiniiScan software allows you to use an oscilloscope to identify signal integrity issues that hardware triggering is unable to find in your electronic designs. This innovative software scans through thousands of acquired waveforms per second to help you isolate signal anomalies, saving you time and improving designs.

Innovative triggers

The zone qualify finder allows you to draw a "must intersect" or "must not intersect" zone on the oscilloscope screen to visually determine the event identify condition. If you can see the event of interest on the screen, you can create a trigger that will isolate it, saving significant time over some complicated hardware triggers.

Other triggers include non-monotonic edge, measurement limit search, runt and pulse width.

Draw zones on your screen for a unique triggering experience.

Analysis Tools: N8900A Infiniium Offline Oscilloscope Analysis Software

View and analyze away from your oscilloscope and target system

Ever wish you could do additional signal viewing and analysis away from your scope and target system? Now you can. Capture waveforms on your scope, save to a file, and recall into Keysight's Infiniium Offline application.

View and analyze anywhere your PC goes

Take advantage of large high-resolution and multiple displays found in your office. Use familiar scope controls to quickly navigate and zoom in to any event of interest. Use auto measurements and functions for additional insight.

Share scope measurements more easily across your team

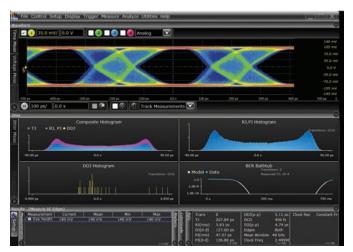

You can share entire data records instead of being limited exclusively to static screen shots.

Create more useful documentation

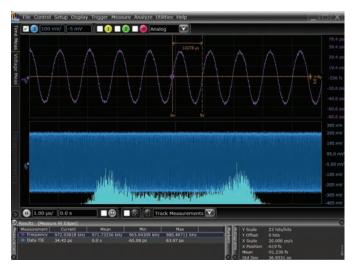

Use features such as right-click cut-and-paste to move screen images between applications, without ever having to save the image to a file. Add up to 100 bookmark annotations and up to 20 simultaneous measurements.

Need advanced analysis capability?

Infiniium Offline includes a variety of upgrade options including serial decode upgrades for a variety of serial buses, jitter analysis, and serial data analysis.

Infiniium Offline software works with all of Infiniium's applications.

Use Infiniium Offline to find signal anomalies, such as power supply coupling.

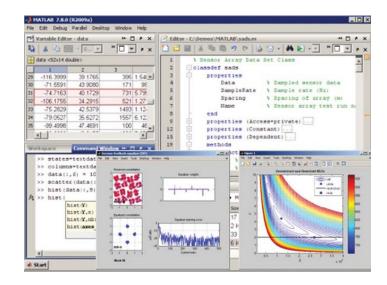

Peak search capability makes Infiniium Offline a frequency domain tool.

Analysis Tools: User-Defined Function (N5430A)

Combine Infiniium and MATLAB for even more analysis

Enhance the Z-Series with a seamless gateway to powerful MATLAB analysis functionality. User-defined function software adds new analysis capabilities to the Z-Series, beyond traditional math/analysis features. Now you have the freedom to develop your own math functions or filters using MATLAB and its Signal Processing Toolbox. With a seamless integration to MATLAB, Infiniium oscilloscopes allow you to display your math and analysis functions live on the oscilloscope screen, just like any other scope's standard functions.

Analysis Tools: Complete List of Analysis Software

- 1. Supports any combination of Infiniium oscilloscope models with software 5.50 and above.
- 2. Compliance software is not supported on DSAZ632A, DSOZ632A, DSAZ592A and DSOZ592A scope models.

Compliance and Automated Testing

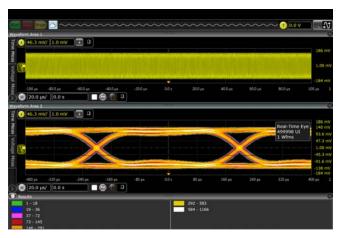

Today's demanding environment means you have much less time to understand the intricacies of the technologies you are testing. You also have less time to develop and test automation software that is designed to increase measurement throughput and decrease time to market. Compliance applications save you time and money with measurement automation built into the compliance application. No longer do valuable resources need to be exclusively tied to writing automation software. Instead they can be deployed to designing the next big project.

Infiniium's compliance applications are fully functional with design tools such as ADS. Imagine running your waveforms at design through the entire suite of compliance tests, giving more insight earlier than was previously possible. As the design moves to silicon and then to validation, the same suite of tests can be run live on your device.

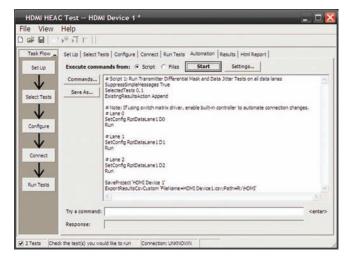

Compliance applications that run on Z-Series oscilloscopes are certified to test to the exact specifications of each technology standard. If a test passes on the Z-Series scope in your lab, you can be assured that it will pass in test labs and at plug fests worldwide. Keysight experts on technology boards and industry standards committees help define compliance requirements. As a result, you can be sure that Z-Series oscilloscope tools deliver to critical specifications. Setup wizards combined with intelligent test filtering give you confidence you're running the right tests. Comprehensive HTML reports with visual documentation and pass/fail results guarantee that critical information is retained on each test.

Quick and easy automated switching

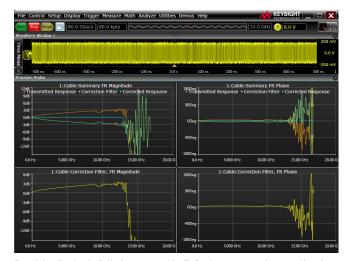

Only Keysight's Z-Series oscilloscopes feature compliance applications with both the user-defined application's add-in capability and integrated PrecisionProbe compensation. Switch paths can vary in their characteristics and have unwanted loss. By enabling PrecisionProbe in its compliance applications, Z-Series scopes allows you to characterize and compensate for every path in the switch, making every path's frequency response identical in both magnitude and phase. These tools makes switch automation quick and painless. The Z-Series and its compliance applications make automation more automated than ever. Your technicians no longer need to spend valuable time physically changing connections.

Compliance applications make testing to today's technologies standards easy.

The remote programming interface makes it easy to control automation applications via your PC.

PrecisionProbe is fully integrated in Z-Series automation applications.

Compliance and Automation Testing: User-Defined Application (N5467B)

Custom automation for your Z-Series oscilloscope

The user-defined application is the only fully customizable automated environment made for an oscilloscope by an oscilloscope designer. It provides full automation, including the ability to control other Keysight instruments, external applications such as MATLAB and your DUT software.

Simplify your automation

The user-defined application (UDA) makes automation simple. The application takes the Infiniium compliance application framework and gives you full access to its interface. UDA allows for automation testing in as little as one minute. Use UDA to control other Keysight instruments such as signal generators and network analyzers to create a full suite of measurements.

Full measurement report

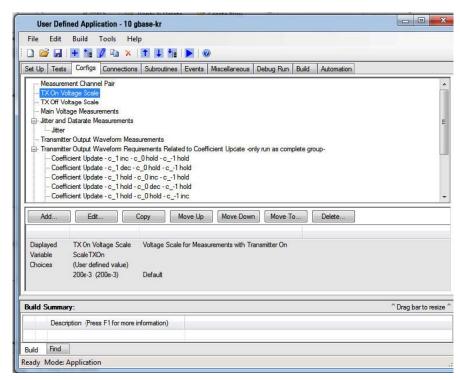

No automation would be complete without a simple-to-view and easy-to-understand report. UDA provides a full report of the pass/fail criteria you have provided.

Add-in capability

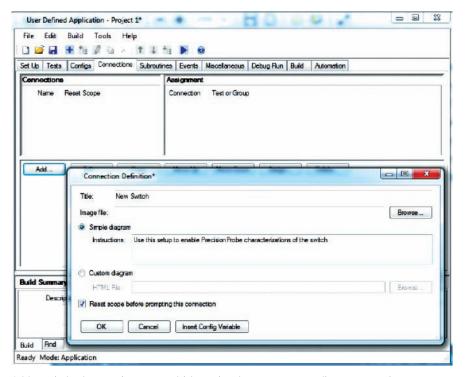

Ever wanted to add testing to your compliance applications? All Infiniium compliance applications support the industry's most flexible testing mechanism with UDA add-in capability. Create the custom testing you need and then plug it into your compliance application to expand the application to your testing needs. UDA add-in capability is available only on Infiniium oscilloscopes.

PrecisionProbe and switch compatibility

UDA makes automation of switches in your system simple and accurate. Use PrecisionProbe to characterize the path of the switch and then let UDA's unique GUI switch between every input in your switch system. Every input can look identical in its frequency response thanks to this advanced technology.

Customize your own tests and requirements with user-defined application in the familiar Keysight framework.

Add a switch when testing your multi-lane signals to automate tedious test requirements.

Compliance and Automation Testing: Switch Matrix Support

Comprehensive testing, easily achieved

Eliminate reconnections (reducing errors)

Compliance applications on the Z-Series support a switch matrix, making testing simple by automating tests for each lane of a multi-lane bus. Typical testing requires reconnecting the oscilloscope each time you switch a lane, which causes wasted time and inaccuracies. The Z-Series solves this problem by supporting switch matrix through its compliance test. Simply connect the switch to the oscilloscope and all the lanes, and then click Run to complete full testing of your entire device.

Maintain accuracy

The framework fully supports Keysight's PrecisionProbe software (N2809A) and InfiniiSim software (N5465A). This gives you the ability to characterize every switch path to the device under test (both magnitude and skew) and ensure that all of them maintain the same level of accuracy.

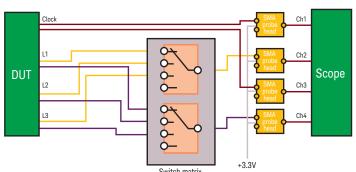

Customize your testing

Use the remote programming interface (standard feature on the Z-Series) and N5467A user-defined application for device control, instrument control and test customization.

Factory-installed on new scope purchase or user-installed on existing scope.

Typical switch configuration for HDMI testing (now supported in the Z-Series).

Skews between switch paths are easily maintained with Keysight's unique software.

Must be user-installed.

Compliance and Automation Testing: Other Options on Z-Series Oscilloscopes

In the previous pages we have highlighted a few of the key technologies that benefit from the industry's only four-channel oscilloscope with more than 20 GHz bandwidth. The Z-Series offers over 20 compliance applications and the list continues to grow. All applications are fully compatible with InfiniiSim, PrecisionProbe and UDA's unique add-in capability.

^{1.} Compliance software is not supported on DSAZ632A, DSOZ632A, DSAZ592A and DSOZ592A scope models.

Protocol Analysis

Z-Series oscilloscopes come with more than 15 protocol decoders, including the industry's only 64/66 b decoder. The Z-Series protocol tools feature time-correlated markers that let you easily move between the listing window and the waveform. Protocol tools can be used on up to four lanes simultaneously.

These unique tools feature search and trigger capability that lets you scan through the waveform to find the trigger condition that interests you. Protocol tools are fully compatible with Infiniium's serial data analysis and are available on the Infiniium offline tool.

Z-Series decoding the PCI Express Gen 3 packets.

- 1. Standard on DSA models or with high-speed SDA option.
- 2. Standard on MSO models or with MSO upgrade.
- 3. Compliance software is not supported on DSAZ632A, DSOZ632A, DSAZ592A, and DSOZ592A scope models.

Achieve New Extremes

Configure your high-performance real-time oscilloscope solution today

Get the most out of your oscilloscope investment by choosing options and software to speed your most common tasks. Use option numbers when ordering at time of purchase. Use model numbers to add to an existing scope.

1. Choose your oscilloscope

| Oscilloscope | Description |
|--------------|---|
| DSOZ634A | 63-GHz digital storage oscilloscope |
| DSAZ634A | 63-GHz digital signal analyzer ¹ |
| DSOZ632A | 63-GHz digital storage oscilloscope |
| DSAZ632A | 63-GHz digital signal analyzer ¹ |
| DSOZ594A | 59-GHz digital storage oscilloscope |
| DSAZ594A | 59-GHz digital signal analyzer ¹ |
| DSOZ592A | 59-GHz digital storage oscilloscope |
| DSAZ592A | 59-GHz digital signal analyzer ¹ |
| DSOZ504A | 50-GHz digital storage oscilloscope |
| DSAZ504A | 50-GHz digital signal analyzer ¹ |
| DSOZ334A | 33-GHz digital storage oscilloscope |
| DSAZ334A | 33-GHz digital signal analyzer ¹ |
| DSOZ254A | 25-GHz digital storage oscilloscope |
| DSAZ254A | 25-GHz digital signal analyzer ¹ |
| DSOZ204A | 20-GHz digital storage oscilloscope |
| DSAZ204A | 20-GHz digital signal analyzer ¹ |

^{1.} DSA models come standard with 100 Mpts memory, EZJIT Complete and Serial Data Analysis software.

All models come with a front cover, power cord, keyboard, mouse, 3.5 mm male-to-male calibration cable (54916-61626), 3.5 mm (male) to 2.4 mm (male) calibration cable (54932-61630), ESD strap, and (5) 3.5 mm female-to-female coax adapters (5061-5311). 50, 59, and 63 GHz models come with (2) additional 1.85 female-to-female adapters (54932-68712).

All models come standard with removable SSD hard drive.

3. Upgrade your oscilloscope

| Model numbers | Description |
|---------------|-------------------------------------|
| | Upgrades within the Z-Series family |
| N2764BU-025 | Bandwidth upgrade from 20 to 25 GHz |
| N2764BU-033 | Bandwidth upgrade from 25 to 33 GHz |
| N2764BU-050 | Bandwidth upgrade from 33 to 50 GHz |
| N2764BU-059 | Bandwidth upgrade from 50 to 59 GHz |
| N2764BU-062 | Bandwidth upgrade from 50 to 63 GHz |
| N2764BU-162 | Bandwidth upgrade from 59 to 63 GHz |

Note: All except 50 to 59 GHz and 50 to 63 GHz upgrades require return to Service Center but do not include Service Center costs. Calibration incurs additional charges.

Number of channels

| Model numbers | Description |
|---------------|--|
| | Upgrades within the Z-Series family |
| N2128A | Number of channel upgrade from 1-channel to 2-channel 59 or 63 GHz and 2-channel to 4-channel 33 GHz |

Note: Only applies to Infiniium Z-Series models DSAZ632A, DSOZ632A, DSAZ592A, and DSOZ592A. No return to service center is required. Upgrade is software only.

Multi-frame options

| Model numbers | Description |
|---------------|--|
| | Upgrades within the Z-Series family |
| N2107A | Infiniium Z-Series multi-frame expansion kit from five to six frames |
| N2106A | Infiniium Z-Series multi-frame expansion kit for adding one frame |
| N2105A | Infiniium Z-Series multi-frame base kit for stacking two frames |
| N2109AU | Infiniium Z-Series sync port upgrade kit for 20 to 33 GHz models (> 33 GHz not needed) |

Denotes warranted specifications, all others are typical. Specifications are valid after a 30-minute warm up period, and ± 5 °C from annual calibration

Vertical resolution for 8 bits = 0.4% of full scale, for 12 bits = 0.024% of full scale.

Full scale is defined as 8 vertical divisions. Magnification is used below 7.5 mV/div. Below 7.5 mV/div, full-scale is defined as 60 mV/div. The major scale settings are 5 mV, 10 mV, 20 mV, 50 mV, 100 mV, 200 mV, 500 mV, and 1 V.

Input impedance is valid when V/div scaling is adjusted to show all waveform vertical values within scope display. Rise time calculated by using 0.44/BW for (10 to 90%) rise time. Rise time calculated by using 0.31/BW for (20 to 80%) rise time.

| Hardware trigger | |
|-----------------------------|--|
| Sensitivity | Internal low: 2.0 div p-p 0 to 22 GHz |
| | Internal high: 0.3 div p-p 0 to 18 GHz, 1.0 div p-p 0 to 22 GHz |
| Edge trigger bandwidth | > 20 GHz |
| Minimum pulse width trigger | |
| Hardware | < 250 ps |
| Software (InfiniiScan) | 40 ps |
| Level range | |
| Internal | \pm 4 div from center screen or \pm 4 V, whichever is smaller |
| Auxiliary | \pm 5 V, also limit input signal to \pm 5 V |
| Sweep modes | Auto, triggered, single |
| Display jitter | Equal to the TIE jitter measurement floor (internal edge triggering with JitterFree) |
| (displayed trigger jitter) | |
| Trigger sources | Channel 1, Channel 2, Channel 4, Aux |
| Trigger modes | |
| Edge | Triggers on a specified slope (rising, falling or alternating between rising and falling) and voltage level on any channel or auxiliary trigger. Edge trigger bandwidth is > 20 GHz |
| Edge transition | Trigger on rising or falling edges that cross two voltage levels in > or < the amount of time specified. Edge transition setting from 250 ps |
| Edge then edge (time) | The trigger is qualified by an edge. After a specified time delay between 10 ns to 10 s, a rising or falling edge on any one selected input will generate the trigger |
| Edge then edge (Event) | The trigger is qualified by an edge. After a specified delay between 1 to 16,000,000 rising or falling edges, another rising or falling edge on any one selected input will generate the trigger |
| Glitch | Triggers on glitches narrower than the other pulses in your waveform by specifying a width less than your narrowest pulse and a polarity. Triggers on glitches as narrow as 125 ps. Glitch range settings: < 250 ps to < 10 s |
| Pulse width | Trigger on a pulse that is wider or narrower than the other pulses in your waveform by specifying a pulse width and a polarity. Triggers on pulse widths as narrow as 125 ps. Pulse width range settings 250 ps to 10 s. Trigger point can be "end of pulse" or "time out" |
| Runt | Triggers on a pulse that crosses one threshold but fails to cross a second threshold before crossing the first again. Can be time qualified with minimum setting of 250 ps |

| Hardware trigger (Continued) | |
|-------------------------------------|--|
| Timeout | Trigger when a channel stays high, low, or unchanged for too long. Timeout setting: from 250 ps to 10 s |
| Pattern/pulse range | Triggers when a specified logical combination of the channels is entered, exited, present for a specified period of time or is within a specified time range or times out. Each channel can have a value of High (H), Low (L) or Don't care (X) |
| State | Pattern trigger clocked by the rising, falling or alternating between rising and falling edge of one channel |
| Window | Triggers on an event associated with a window defined by two-user adjustable thresholds. Event can be window "entered," "exited," "inside (time qualified)," or "outside (time qualified)" voltage range. Trigger point can be "cross window boundary" or "time out." Time qualify range: from 250 ps to 10 s |
| Video | Triggers from negative sync composite video, field 1, field 2, or alternating fields for interlaced systems, any field, specific line, or any line for interlaced or non-interlaced systems. Supports NTSC, PAL-M (525/60), PAL, SECAM (625/50), EDTV (480p/60), EDTV (576p/50), HDTV (720p/60), HDTV (720p/50), HDTV (1080i/60), HDTV (1080p/50), HDTV (1 |
| Trigger sequences | Three-stage trigger sequences including two-stage hardware (Find event (A) and Trigger event (B)) and one-stage InfiniiScan software trigger. Supports all hardware trigger modes except "edge then edge" and "video," and all InfiniiScan software trigger modes. Supports "delay (by time)" and "reset (by time or event)" between two hardware sequences. The minimum latency between "find event (A)" and "trigger event (B)" is 3 ns |
| Trigger qualification and qualifier | Single or multiple channels may be logically qualified with any other trigger mode |
| Trigger holdoff range | 100 ns to 10 s |
| Trigger actions | Specify an action to occur and the frequency of the action when a trigger condition occurs. Actions include email on trigger and execute "multipurpose" user setting |
| Software trigger (Requires N5414 | 4B InfiniiScan event identification software – Option 009) |
| Trigger modes | |
| Zone qualify | Software triggers on the user-defined zones on screen. Zones can be specified as either "must intersect" or "must not intersect." Up to eight zones can be defined across multiple channels |
| Generic serial | Software triggers on NRZ-encoded data up to 8.0 Gbps, up to 80-bit pattern. Support multiple clock data recovery methods including constant frequency, 1st-order PLL, 2nd-order PLL, explicit clock, explicit 1st-order PLL, explicit 2nd-order PLL, Fibre Channel, FlexRay receiver, FlexRay transmitter (requires E2688A except for the constant frequency clock data recovery mode) |
| Measurement limit | Software triggers on the results of the measurement values. For example, when the "pulse width" measurement is turned on, InfiniiScan measurement software trigger triggers on a glitch as narrow as 40 ps. When the "time interval error (TIE)" is measured, InfiniiScan can trigger on a specific TIE value |
| Non-monotonic edge Runt | Software triggers on the non-monotonic edge. The non-monotonic edge is specified by setting a hysteresis value Software triggers on a pulse that crosses one threshold but fails to cross a second threshold before crossing the first again. Unlike hardware runt trigger, InfiniiScan runt trigger can be further qualified via a hysteresis value |

| Maximum measurement update rate | > 50,000 measurement/sec (one measurement turned on) |
|---|---|
| maximum measurement upuate rate | > 250,000 measurement/sec/measurement (ten measurements turned on) |
| Measurement modes | Standard, Measure all edges mode |
| Waveform measurements | otandard, mododro dit odgoo modo |
| Voltage | Peak to peak, minimum, maximum, average, RMS, amplitude, base, top, overshoot, preshoot, upper, middle lower, Vovershoot, Vtime, Vpreshoot, crossing, pulse base, pulse amplitude, pulse top, PAM level mean ² , PAM level RMS ² , PAM level skew ² , PAM level thickness ² |
| Time | Rise time, fall time, positive width, negative width, burst width, burst period, burst interval, Tmin, Tmax, Tvolt, + pulse count, - pulse count |
| Clock | Period, frequency, duty cycle to duty cycle, phase, N-period |
| Data | Setup time, hold time |
| Mixed | Area, slew rate |
| Frequency domain | FFT frequency, FFT magnitude, FFT delta frequency, FFT delta magnitude, peak detect mode |
| Level qualification | Any channels that are not involved in a measurement can be used to level-qualify all timing measurements |
| Eye-diagram measurements | Eye height, eye width, eye jitter, crossing percentage, Q factor, and duty-cycle distortion |
| Jitter analysis measurements | Requires Option 002 (or E2681A), 004 (N5400A), or 070 (N8823A). Standard on DSA Series |
| Clock | Time interval error, N-period, period to period, positive width to positive width, neg width to neg width, and duty cycle to duty cycle |
| Data | Time interval error, unit interval, N Unit Interval, unit interval to unit interval, data rate, CDR, de-emphasis |
| Statistics | Displays the current, mean, minimum, maximum, range (max-min), standard deviation, number of measurements value for the displayed automatic measurements |
| Histograms | |
| Source | Waveform or measurement |
| Orientation | Vertical (for timing and jitter measurements) or horizontal (noise and amplitude change) modes, regions are defined using waveform markers |
| Measurements (available as a function) | Mean, standard deviation, mean ± 1, 2, and 3 sigma, median, mode, peak-to-peak, min, max, total hits, peak (area of most hits), X scale hits, and X offset hits |
| Mask testing | Allows pass/fail testing to user-defined or Keysight-supplied waveform templates. Automask lets you create a mask template from a captured waveform and define a tolerance range in time/voltage or screen divisions. Test modes (run until) include test forever, test to specified time or event limit, and stop on failure Executes "multipurpose" user setting on failure |
| | "Unfold real-time eye" feature allows individual bit errors to be observed by unfolding a real-time eye when clock recovery is on |
| | Communications mask test kit option provides a set of ITU-T G.703, ANSI T1.102, and IEEE 802.3 industry-standard masks for compliance testing |
| Waveform math | |
| Number of functions Hardware accelerated math operations | Sixteen Differential and Common Mode Absolute value, add, amplitude demodulation (radar envelope), average, Butterworth ¹ , common mode, delay, differentiate, divide, FFT magnitude, FFT, phase, FIR ¹ , high pass filter, histogram, horizontal gating, |
| | integrate, invert, LFE ¹ , low pass filter (4th-order Bessel Thompson filter), magnify, max, measurement trend, min, multiply, RT Eye ¹ , smoothing, SqrtSumOfSquare ¹ , square, square root, subtract, versus, and optional user defined function (Option 010) |
| FFT | |
| Frequency range | DC to 80 GHz (at 160 GSa/s) or 40 GHz (at 80 GSa/s) or 20 GHz (at 40 GSa/s) |
| Frequency resolution | Sample rate/memory depth = resolution |
| Window modes | Hanning, flattop, rectangular, Blackman-Harris, Hamming |

Requires EZJIT Plus (Option N5400A) or EZJIT Complete (Option N8823A) software.
 Requires PAM-4 analysis (Option N8827A) software.

| Hardware trigger (Continued) | |

| CPU | Intel i5-3550S quad-core CPU at 3.00 GHz |
| PC system memory | 16 GB DDR3 RAM |
| Drives (SSD) | 500-GB internal hard drive removable hard drive, additional hard drives (N2110A) |
| Peripherals | Logitech optical USB mouse, compact USB keyboard supplied. All Infiniium models |
| | support any Windows-compatible input device with a serial, PS/2 or USB interface. |
| File types | |
| Waveforms | Compressed internal format (*.wfm (200 Mpts)), comma-separated values (*.csv (2 Gpts)), tab-separated values |
| | (*.tsv (2 Gpts)), public binary format (.bin (500 Mpts)), Y value files (*.txt (2 Gpts)), |
| | hierarchal data file (*.hf5 (2 Gpts)), composite data file (*.osc (2 Gpts)) |
| Images | BMP, PNG, TIFF, GIF, JPEG or osc file format |
| I/O ports | RS-232 (serial), parallel, PS/2, USB 2.0 hi-speed (host), USB 2.0 hi-speed (device), VGA, DisplayPort, USB 3.0, |
| | dual-monitor video output, auxiliary output, trigger output, time base reference output |

| General characteristics | | |
|---|---|--|
| Temperature | Operating: 5 to + 40 °C; Non-operating: -40 to +65 °C | |
| Humidity | Operating: Up to 95% relative humidity (non-condensing) at +40 °C | |
| | Non-operating: Up to 90% relative humidity at +65 °C | |
| Altitude | Operating: Up to 4,000 meters (12,000 feet); Non-operating: Up to 15,300 meters (50,000 feet) | |
| Vibration | Operating random: 00.21 g (rms) | |
| | Non-operating random: 2.0 g (rms) | |
| | Swept sines: (0.50 g) | |
| Power | 100 to 240 VAC ± 10% at 50/60 Hz | |
| | Maximum input power 1350 W | |
| | Well-regulated power is required for 100 to 120 VAC operation | |
| Weight | 32.2 kg (71 lbs) | |
| Dimensions | Height: 33.8 cm (13.3 in); Width: 50.8 cm (20 in); Depth: 49.3 cm (19.4 in) | |
| Safety CAN/CSA-C22.2 No. 61010-1-04 UL Std. No. 61010-1 (2nd Edition) | | |

Keysight Oscilloscopes

Multiple form factors from 20 MHz to > 90 GHz | Industry leading specs | Powerful applications

www.axiestandard.org

AdvancedTCA® Extensions for Instrumentation and Test (AXIe) is an open standard that extends the AdvancedTCA for general purpose and semiconductor test. Keysight is a founding member of the AXIe consortium. ATCA®, AdvancedTCA®, and the ATCA logo are registered US trademarks of the PCI Industrial Computer Manufacturers Group.

LAN eXtensions for Instruments puts the power of Ethernet and the Web inside your test systems. Keysight is a founding member of the LXI consortium.

PCI eXtensions for Instrumentation (PXI) modular instrumentation delivers a rugged, PC-based high-performance measurement and automation system.

From Hewlett-Packard through Agilent to Keysight

For more than 75 years, we've been helping you unlock measurement insights. Our unique combination of hardware, software and people can help you reach your next breakthrough. Unlocking measurement insights since 1939.

1939 THE FUTURE

Three-Year Warranty

3 YR WARRANTY

www.keysight.com/find/ThreeYearWarranty

Keysight's committed to superior product quality and lower total cost of ownership. Keysight is the only test and measurement company with a three-year warranty standard on all instruments, worldwide. And, we provide a one-year warranty on many accessories, calibration devices, systems and custom products.

www.keysight.com/find/AssurancePlans

Up to ten years of protection and no budgetary surprises to ensure your instruments are operating to specification, so you can rely on accurate measurements.
